

SOUND ADVICE Vol. 35, October, 26<sup>th</sup> 2007

## CD Wireless Series

Flexible listening pleasure in multiple dimensions: the active CD floorstanding loudspeakers offer outstanding sound quality in a particularly slim design. The wireless option also enables you to enjoy cable-free signal transmission without any loss in sound quality. Wireless speakers mean multi-room performance with remote volume control operation, and the flexibility of putting your loudspeakers wherever you choose. All you need is an electrical outlet.

SOUND ADVICE Vol. 35, October, 26<sup>th</sup> 2007

### Signal transmission CD quality

The CD 3500 wireless receives its signal from a digital sender. The system operates at distances of up to 25 meters.

### Bi-directional

Noise-free transmission through a bi-directional wireless system: transmitter and loudspeaker communicate with each other.

### Stereo

With their outstanding sound characteristics the active loudspeakers of the CD series are ideal for classic stereo sound. As a practical addition to flat screen technology the CD 3200 active loudspeakers come fully equipped with integrated amplifiers.

### Surround

Strong sound quality and the perfect partner for flat screen technology, the loudspeakers of the CD series lend an elegant note to every home theater system – and that CD 3500 wireless loudspeakers even dispense with the need for cables.

SOUND ADVICE Vol. 35, October, 26<sup>th</sup> 2007

### **Multi-room**

The relaxed way to achieve perfect sound quality in every room: up to three systems of the CD 3500 wireless loudspeakers can be used in parallel, with the volume conveniently operated through the remote control unit supplied.

### **So much sound in so little space**

Four drivers with aluminum cones and Canton's patented wave technology combine for an impressively full range with precision and power.

### **Fully active and high performance**

The digital ICEpower™ power amplifier offers high performance in a compact unit with minimum heat build-up.

What hi-fi? Sound and Vision – November 2006

## Wireless speakers

### Un-wired for stereo sound

***“Hi-fi’s Holy Grail – audiophile speakers minus wires is one step closer, thanks to Canton’s clever new towers***

**THE IDEAL SCENARIO** is music minus speakers and cables, but while we wait for invisible monitors, German manufacturer Canton is promising audiophile sound, minus the wires. Its CD3500 floorstanders ditch the speaker cable in favour of wireless operation, so all you need is a couple of mains leads to plug in each brushed-aluminium silver speaker. Wireless ability is, of course, not new- but the promise of hi-fi quality sound delivery is a rarer thing.

*The highest-priced option brings powered speakers, plus a ‘transceiver’, which takes the signal from your amplifier and magically wings it over to the CD3500 towers. Perfect for all you minimalist loft-living types, and sure to find favour with cable-phobes the world over...”*
