

Isotek

SOUND ADVICE Vol. 8, February, 9th 2007

MRP RS. 43,000/- ONLY

The Isotek Solus
(Cleanline)

Now in much improved
G11 guise

Suitable for mid range
separates systems and
can be used on
systems of higher

caliber if the current draw is low enough. Seems expensive, but the results are quite spectacular - soundstages are transformed and expanded - top end detail sweetened up and increased and the bass end becomes tighter and faster.

The Solus is our one of our entry level 6-way filters which has the option of upgrade to the more sophisticated Mini Sub. The Solus was designed to be a very rewarding single box 'plug-n-play' solution for a complete audio or home theatre system. Using our advanced 'Polaris-X' technology the Solus is able to draw mains contaminants away from audio components plugged into the unit. All components featured in the Solus are of the highest grade and are under stressed, this gives greater longevity, which are then hand soldered onto the PCB with silver solder.

What Hi-Fi? (October 2002)

10 Easy Ways To Upgrade Your Hi-Fi Magazine Feature

"Who would have thought that mains distribution could be so sexy? There's no denying the IsoTek Cleanline is a cool-looking piece of kit..."

"The biggest improvement is the extra detail..."

"Dynamics are also greatly improved..."

"... the difference it makes to the sound is astonishing. And don't forget, it can also be used to improve the sound and picture quality of your TV, DVD, and VCR - in fact up to six components can benefit from this impressive piece of kit."
