SOUND ADVICE Vol. 53: October, 24th 2008

The impressive energy and dynamics are achieved by newly developed 20 cm woofers, arranged in a dual driver design. The large diaphragm surface and the immense inner volume of the cabinet allows authentic deep bass delivery and reproduction down to 31 Hz. Even the most energetic low frequency notes are reproduced in an absolutely precise and controlled manner, thanks to extraordinarily large voice coils with the magnet inside the coil. The result is remarkable speed and accuracy in the lower registers. Voices and instruments are handled by a dedicated midrange driver. The separation of the midrange from the lower bass in the isolated cabinet chamber avoids influence and disturbance from the woofer section. The Focus 360 exhibits precise staging and an absolutely pure sound reproduction at any volume, especially with voices and natural instruments. The Esotar2 soft dome tweeter is the ideal match for the powerful bass and midrange drivers, while the special coating of the fabric dome enables the smooth, natural high frequencies Dynaudio has become famous for – even when revving up the amp to maximum levels. The high-quality veneered cabinet is additionally braced and reinforced to ensure absolute rigidity and minimize resonances, even when playing loud. The acoustically optimized cloth grille runs over the full cabinet length, bringing an elegant, slim shape to the design.

Dynaudio Focus 360: A powerful floorstanding loudspeaker, designed to allow one to relive and experience music with all its energy.

**Technical specifications:**

Sensitivity 88 dB  
IEC Power Handling > 300 watts  
Impedance 4 ohms  
Frequency Response 31 Hz - 25 kHz  
Int. Cabinet Volume 63 litres  
Box Principle Bass Reflex  
Crossover Frequencies 400, 2200 Hz  
Weight 36,1 kg  
Dimensions (W x H x L) 248 x 1240 x 385 mm
